VS Code Extension

 Built with TypeScript

License [AGPL-3.0](#)

 mentioned in awesome

Powered by [Claude Agent SDK](#)

A VSCode extension that brings Claude Code directly into your editor.

Overview

Claude Code integrates Claude AI into VSCode, providing an interactive coding assistant with conversation history, tool integration, and intelligent code understanding.

Features

- Interactive chat interface with Claude Code
- Session management and conversation history
- Intelligent file operations and code analysis
- Terminal command execution
- Permission-based tool access
- Support for multiple Claude models
- Real-time streaming responses
- Syntax highlighting and markdown rendering

Installation

```
# Install dependencies
pnpm install

# Build the extension
pnpm build

# Package as VSIX
pnpm package
```

Install the generated `.vsix` file in VSCode through Extensions > Install from VSIX.

Development

Running in Development Mode

Start the development server with hot module replacement:

```
pnpm dev
```

This will concurrently start:

- Vite dev server (port 5173) for the webview
- esbuild watcher for the extension

Debugging

Open the project in VSCode and use the debugging configurations:

Run Extension

Full build mode without HMR. The extension will be built from scratch before launching.

- Press **F5** or select "Run Extension" from the debug panel
- Suitable for production-like testing

Run Extension (HMR)

Development mode with hot module replacement for the webview.

- Select "Run Extension (HMR)" from the debug panel
- Webview changes will reload automatically without restarting the extension
- Faster iteration during development

Build Commands

```
# Build everything
pnpm build

# Build extension only
pnpm build:extension

# Build webview only
pnpm build:webview

# Run tests
pnpm test

# Type checking
pnpm typecheck:all
```

Usage

1. Open the Claude Code sidebar from the activity bar
2. Start a new conversation or continue from history
3. Ask questions, request code changes, or get help with your project
4. Review and approve tool operations when prompted

Requirements

- VSCode $\geq 1.98.0$
- Node.js $\geq 18.0.0$

Contributing

Contributions are welcome! If you would like to contribute to this project, please open an issue first to discuss your ideas or proposed changes.
